

TLB-2020-C

20 mW Full Band Tunable CW Laser Butterfly

Full C Band Tunable CW Laser

Features

- Wide tuning range using highly reliable DFB laser arrays
- Excellent wavelength stability with no possibility of mode hop
- CW output power of 20 mW
- Excellent Relative Intensity Noise (RIN): -140 dB/Hz typical
- High Side Mode Suppression Ratio (SMSR): 50 dB typical
- Polarization Maintain Fiber

Applications

- LR, LR2 and LH DWDM optical transport
- Large form factor full band tunable transponders

Benefits

- DFB laser performance
- Simple control loops

*The **TLB-2020-C** is the second generation of compact 20 mW widely tunable transmission lasers built with Santur's own proprietary DFB laser array, MEMs coupling and packaging technology. Santur's technology provides for a highly efficient, small form factor full band tunable butterfly with the lowest power dissipation in the industry.*

*Ideally suited for use in a wide variety of DWDM Metro and LH systems, the Santur **TLB-2020-C** provides the best combination of performance features available, offering a unique combination of optical power, wide tunability, and low power dissipation. The **TLB-2020-C** includes an integrated wavelength locker and a uniquely stable DFB laser array.*

High-power performance, reliability, ease of control, and economies of scale derived from the exclusive, proven technology, differentiate this product from others in the industry.

Mechanical Outline:

dimensions are in millimeters.

Connector is Samtec CLM-118-02 style.

Connection to customer system is via mating Samtec FTM-118-03 or custom flex jumper.
